## OBJECTIVES AND PROCESS

- Seeks long-term capital appreciation
- Invests at least two-thirds of its assets in equity securities of US companies of any market capitalisation
- Identifies companies believed to be under-priced yet have attractive growth prospects, using analysis to determine a company's private market value (price an investor is willing to pay for the entire company)
- Targets companies with strong ESG performance tied to the durability of their business model or companies with ESG improvement catalysts in place
- Uses a negative screen to exclude securities issued by companies based on their exposure to ESG risks
- May invest:
  - in equity securities of approximately 30 to 40 US companies of any market cap
  - up to one-third of total assets in equity securities through ADRs, CDRs, EDRs, GDRs, IDRs and similar depositary receipts or US\$-denominated equities issued by non-US issuers
  - by using futures/derivatives for hedging or efficient portfolio management purposes

#### **KEY RISKS**

Market risk: securities may decline in value due to factors affecting securities markets generally, and equity securities generally have greater price volatility than debt securities. Geographic concentration risk: investments concentrated in specific geographic regions and markets may be subject to greater volatility due to economic downturns and other factors affecting the specific geographic regions. Smaller-company securities risk: securities of companies with smaller market capitalisations tend to be more volatile and less liquid than securities of larger companies. ESG risk: applying an ESG screen for security selection may result in lost opportunity in a security or industry resulting in possible underperformance relative to peers. ESG screens are dependent on third-party data and errors in the data may result in the incorrect inclusion or exclusion of a security.
